Company OSHA-Compliant Safety Manual *Only \$269.99*

A written company safety manual or safety program is a critical component of workplace injury prevention and regulatory compliance programs. A safety manual is a set of safety programs that have been selected based upon the hazards present at an employer's worksite. This safety manual essentially lays out your plan for providing a safe workplace and complying with applicable OSHA laws and regulations.

Most small and medium-sized businesses simply do not have the financial and human resources to sit down and develop a company safety manual from scratch. The internet is covered with stolen and/or out-dated materials, and outright frauds. Business owners simply don't know where to turn for assistance with their safety and OSHA-compliance issues.

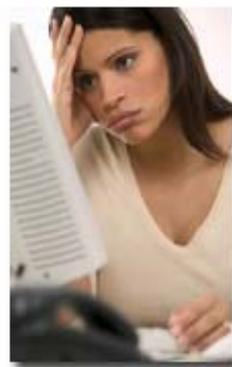

Not any more! DigitalReg™ created safetymanualpro.com for people just like you. With this website you can easily create an OSHA-compliant safety manual specific to your company. You choose the topics/programs you want us to include in your company safety manual. We then build a table of contents around your selections and include all of the necessary forms and checklists. The entire document is then customized with your company and safety manager's name throughout the safety manual. Your logo can even be inserted on the cover page to create a more professional image. Customization takes 24 to 72 hours depending on any existing backlog. The document is then emailed to you in Microsoft Word® format so that you can easily make future revisions. If a printed and bound hardcopy was selected, it will be shipped out UPS Ground.

Stop stressing right this very minute! Lets say you have someone in-house try to develop your company safety manual from scratch. Lets say this person makes \$10.00/hour and with benefits averages \$12.50/hour. Being conservative mind you, it would take "at least" 80 hours to develop a safety manual that was both state and federal OSHA compliant. That means that the direct cost of this manual would be \$1,000. This doesn't take into account the indirect costs related to the lost productivity resulting from this person not tending to the actual job he/she was hired to perform.

With the click of a mouse button and for only \$269.99 you can have a completely customized, OSHA compliant safety manual in as little as 24 hours. Don't wait a minute longer. ORDER
