Beneficiaries who need short-term skilled care (nursing or rehabilitation services) on an inpatient basis following a hospital stay of at least three days are eligible to receive covered services in skilled nursing facilities (SNFs). SNFs are the most commonly used post-acute care setting. In fiscal year 2008, Medicare paid over $24 billion for about 2.5 million SNF admissions.

Skilled nursing facilities can be hospital-based units or freestanding facilities. In 2007, 90 percent of stays were in freestanding facilities. With approval from CMS, certain Medicare-certified hospitals (typically small, rural hospitals and critical access hospitals) may also provide skilled nursing services in the hospital beds used to provide acute care services. These are called swing bed hospitals.

The SNF product and Medicare payment

The Medicare SNF benefit covers skilled nursing care, rehabilitation services and other goods and services and pays facilities a pre-determined daily rate for each day of care, up to 100 days. The prospective payment system (PPS) rates are expected to cover all operating and capital costs that efficient facilities would be expected to incur in furnishing most SNF services, with certain high-cost, low-probability ancillary services paid separately. Medicare’s PPS for SNF services started on July 1, 1998. Prior to that, SNFs were paid on the basis of their costs, subject to limits on their per diem routine costs (room, board, and routine nursing care); no limits were applied for ancillary services (such as drugs and therapy).

Setting the payment rates

The initial payment rates were set in 1998 to reflect the projected amount that SNFs received in 1995, updated for inflation.
The daily rate is the sum of three components:

• a nursing component, reflecting the intensity of nursing care patients are expected to require.
• a therapy component, reflecting the amount of therapy services provided or expected to be provided; and
• a non-case mix adjusted component reflecting the costs of room and board, linens, and administrative services.

The nursing component is case-mix adjusted for all RUGs. The therapy component is case-mix adjusted for rehabilitation RUGs and is a constant amount for nonrehabilitation RUGs. The payment for room and board is a constant amount for all RUGs. Medicare’s daily base rates, unadjusted for case mix or wage differences, for fiscal year 2009 are shown in Table 1.

Starting October 1, 2004, SNFs receive a 128 percent increase in the Medicare PPS per diem payment for SNF patients with AIDS.

</table>

Note: RUG (resource utilization group).
*Not case mix adjusted.

This temporary add-on remains in effect until the Secretary certifies that the case mix system makes appropriate adjustment for the costs of AIDS patients.

In October 2011, CMS plans to adopt a new case mix classification system that expands the number of case-mix groups to 66 and revises the patient and service use characteristics associated with each group. The new classification system will have 16 special care groups (up from 3) and 10 clinically complex groups (up from 6).

1 The following services are excluded from the SNF PPS when furnished on an outpatient basis by a hospital or critical access hospital: cardiac catheterization, computed axial tomography, magnetic resonance imaging, radiation therapy, ambulatory surgery.
involving the use of a hospital operating room, emergency services, angiography services, lymphatic and venous procedures, and ambulance services used to transport a beneficiary to a facility to receive any of these services. In addition, the following services must be billed separately: physician and other services billed under the physician fee schedule, erythropoietin for certain dialysis patients, dialysis-related ambulance transportation, hospice care related to a terminal illness, radioisotope services, certain chemotherapy services, and certain customized prosthetic devices.

2 On July 1, 2002, Medicare began paying swing bed hospitals that are not critical access hospitals according to the SNF prospective payment system. Critical access hospitals continue to be paid for their swing beds based on their costs of providing care.

3 By law, this projection excluded costs of SNFs that were exempt from Medicare’s routine cost limits and costs related to payments for exceptions to the routine cost limits. In 1995, it included only 50 percent of the difference between the average costs of hospital-based and freestanding facilities.
