About Us

Scott Goodspeed founded Tri Town Precision Plastics in 1982, operating out of a garage as a one-man shop. Today, the company has evolved into a leading [custom injection molding and contract manufacturing](#) provider, thriving in a state-of-the-art, 95,000 sq. ft. facility that includes [45 injection molding machines and complete tool-building capabilities](#). With over 150 employees, we are able to offer a full range of services under one roof. Our humble origins and company evolution have provided us with the experience and insight to provide a high level of cost-effective custom injection molding services and secondary operations for both large and small companies.

At Tri Town, we view our relationship with our customers as a partnership – working together to provide the highest -quality product at the most reasonable price. Tri Town's facility, staff and equipment position us to increase customer profitability and, in turn, customer growth. Our primary goal in all of our relationships is to clearly understand the customer's product needs and apply that knowledge to the quality planning process. From co-development of R&D products through full production, Tri Town is dedicated to delivering the products and services you expect – the first time and on time. We are an [ISO9001:2008 certified](#) lean organization with a commitment to excellence and continuous improvement in the areas of plastics processing, employee involvement and customer service.

In November 2008, Tri Town announced its plan to install a solar photovoltaic system at its Deep River, CT facility. The system includes 1,254 solar panels that will occupy 23,000 square feet of roof space. [Learn more](#) about Tri Town's commitment to [clean renewable energy](#).

Your partnership with Tri Town Precision Plastics will include:

- **Quick Turnarounds** – With our in-house CAD/CAM tooling and SLS prototyping, we meet short lead times by performing all operations on-site.
- **Efficient Production** – Our lean manufacturing setup includes frequent process reviews to minimize cost and product waste. The goals of our continuous improvement initiatives are to enhance production quality, reduce project expenditure and improve delivery, resulting in high-quality products and satisfied customers.
- **High-Performance Products** – Our partnership philosophy means your product will be designed and developed with a keen focus on its ultimate application.
- **Proactive Customer Service** – Tri Town assigns a dedicated program management team to follow your project through all stages of product manufacturing, secondary operations and delivery, always keeping you apprised of its status.
