# Coronavirus Disease 2019 (COVID-19)

# People Who Are at Higher Risk for Seve

COVID-19 is a new disease and there is limited information regarding risk factors for severe illness. Based on available information and clinical expertise, older adults and people of any age who have underlying medical conditions might be at higher risk for severe illness from COVID-19.

Based on what we know now, those at high-risk for severe illness from COVID-19 are:

- [People 65 years and older](#)
- People who live in a nursing home or long-term care facility

People of all ages with [underlying medical conditions, particularly if not well controlled](#), in

- People with chronic lung disease or moderate to severe asthma
- People who have serious heart conditions
- People who are immunocompromised
  - Many conditions can cause a person to be immunocompromised, including cancer, organ transplant, immune deficiencies, poorly controlled HIV or AIDS, long-term corticosteroids and other immune weakening medications
- People with severe obesity (body mass index [BMI] of 40 or higher)
- People with diabetes
- People with chronic kidney disease undergoing dialysis
- People with liver disease
