Baclofen (Oral Route)

Precautions

Drug information provided by: [Micromedex](#)

Do not suddenly stop taking this medicine. Unwanted effects may occur if the medicine is stopped suddenly. Check with your doctor for the best way to reduce gradually the amount you are taking before stopping completely.

This medicine will add to the effects of alcohol and other CNS depressants (medicines that slow down the nervous system, possibly causing drowsiness). Some examples of CNS depressants are antihistamines or medicine for hay fever, other allergies, or colds; sedatives, tranquilizers, or sleeping medicine; prescription pain medicine or narcotics; barbiturates; medicine for seizures; other muscle relaxants; or anesthetics, including some dental anesthetics. Check with your doctor before taking any of the above while you are using baclofen.

This medicine may cause drowsiness, dizziness, vision problems, or clumsiness or unsteadiness in some people. Make sure you know how you react to this medicine before you drive, use machines, or do anything else that could be dangerous if you are not alert, well-coordinated, and able to see well.

For diabetic patients:

- This medicine may cause your blood sugar levels to rise. If you notice a change in the results of your blood or urine sugar test or if you have any questions about this, check with your doctor.
