Care Everywhere is an ISO 13485:2003 certified software medical device company focused on integrating point-of-care medical devices such as infusion pumps and vital sign monitors with hospital information systems to improve patient safety, nursing productivity, and documentation. The company's Infusion Pump Gateway Server software is an FDA registered Class 1 medical device.

- Care Everywhere's Infusion Pump Gateway software product has been deployed to more than 500 healthcare provider organizations, connecting more than 200,000 diagnostics and therapeutic devices at the point-of-care.
- Since its inception in 2003, Care Everywhere has been focusing on the development of medical device data system software (MDDS) integrating point of care medical devices with hospital information systems.
- Care Everywhere's Network Operation Center (NOC) monitors all connected medical devices and installed Gateway server instances to help hospital clients manage their smart infusion pump fleet and support an integrated nursing medication administration workflow.
