Why upgrade older equipment? For starters, your employees can only be as fast as the equipment they use.

Neglected maintenance on machinery can cause excess wear and tear over the years, causing the machines to slow down and increase production times. Upgrading your equipment will not only lessen your total maintenance costs but lower your production costs from machine down-time as well.

This steel table with a plastic/wood top was beaten-up and worn when IST received it.

Yet, we turned that same table into a ¾ x 8 steel slotted with either 2 or 3 auto-jig ready filler units.

What can we do for your company? Integrated Stealth Technology has more than 35 years of experience in the industry with over 1,000 satisfied customers. IST rebuilds machinery and tables originally manufactured by Alpine, MiTek, Klaisler, Tee Lok, Pacific Automation, Gang Nail Mark V and many others. We will consider a trade-in of almost any used equipment, including Gantries, Roller Presses, Floor Truss Tables and Roof Truss Tables.

We received this 36" Gantry from a customer after 15 years of heavy, everyday use.

Once we were done with it, the Gantry was as good as new and ready for another 15 years of work!

What about installation times? Our set-ups are as unobtrusive as possible. We pride ourselves in installing your upgraded equipment in around 5 days. We can work around any special circumstances, such as installing machinery on one side of your plant while the other side continues working. This will reduce lost production time and allow you to continue making money while also investing in your company's future. In addition, all of IST's installations are personally overseen by our president and warranted for one full year as if the upgraded equipment was brand new.

We will also take your old broken machines....

...and turn them into something to be proud of!

How quickly can we help you upgrade? We have many rebuilt machines in stock that could fit your needs. You could order today and have your like-new equipment installed in your facility in weeks. Or we can design a line or table to meet the customized needs of your business or any space requirements you may have. Upgrading older equipment doesn't have to be a difficult, time consuming process. Give Integrated Stealth a chance to show you how much faster our response time is compared to the competition!

IST will take in the competitions equipment, rebuild problem areas and update the machine to today's specifications.

We put new sprockets on this machine, fixed the push bars and a broken roller. Now it's almost new again.
