Training Access Levels

KnowBe4 gives you [the world's largest library](#) with 1000+ items of security awareness training content; including interactive modules, videos, games, posters and newsletters.

We offer three Training Access Levels: I, II, and III, giving you access to our "always-fresh" content library based on your subscription level. You will get web-based, on-demand, engaging training that addresses the needs of any organization whether you have 50, 500 or 5,000 users.

Kevin Mitnick Security Awareness Training specializes in making sure employees understand the mechanisms of spam, phishing, spear phishing, malware and social engineering; and are able to apply this knowledge in their day-to-day job.

Trainees get unique job-aids: [Social Engineering Red Flags™](#) with 22 things to watch out for in email, and 20 ways to block Mobile Attacks ([PDF](#)). The Training Campaigns do the heavy lifting of getting your users through their training.

Our 5-, 15-, 25- and 45-minute basic training modules specialize in making sure employees understand the mechanisms of spam, phishing, spear phishing, malware, ransomware and social engineering, and are able to apply this knowledge in their day-to-day job.

You get high quality web-based interactive security awareness training combined with common traps, live demonstration videos, short comprehension tests and scenario-based Danger Zone exercises with a variety of [translated content available in over 30 languages](#).

PHISHING

You can schedule regular Phishing Security Tests (PST for short) from our large library of more than 5,000 "known-to-work" templates, choose from the community templates section, which were created by admins for admins to share with their peers. You can also create your own custom phishing templates. There are many [more features!](#)

The **Industry Benchmarking** feature lets you compare your organization's Phish-prone percentage™ with other companies in your industry. See where you stack up! Monitor your employee phish-prone percentages over time and watch how performance from your initial baseline phishing test, after 90 days, and 1 year compares. With regular phishing security tests and security awareness training campaigns, you'll see how your Human Firewall improves over time helping to reduce risk and improve your IT security defense. You'll have real-time stats that helps you keep a pulse on how your security awareness program and employees stack up against other companies in your industry. Great intel to share with your management team!

Our Phishing Reply Tracking allows you to track if a user replies to a simulated phishing email and can capture the information sent in the reply. You can also track links clicked by users as well as test and track if users are opening Office attachments and then enabling macros.

In case an employee falls for one of these simulated phishing attacks, you have several options for correction, including instant remedial online training. You can schedule one-shot, weekly, bi-weekly or monthly simulated phishing attacks and immediately see which employees fall for these social engineering attacks. Here is some visible proof the training works [over a 12-month period.](#)

In addition, KnowBe4's no-charge **Phish Alert Button** reinforces your organization's security culture, users can report suspicious emails with one click.

- When the user clicks the Phish Alert button on a simulated phishing email it's reported in the Admin Console.
- Incident Response gets early phishing alerts from users, creating a network of "sensors".
- Your employee gets instant feedback, which reinforces their training
- Now also supports Outlook Mobile!

Advanced Phishing Features

PhishER™ is your lightweight Security Orchestration, Automation and Response (SOAR) platform to orchestrate your threat response and manage the high volume of potentially malicious messages reported by your users. Emails can be reported through the KnowBe4 Phish Alert Button or simply by forwarding to a mailbox. With automatic prioritization for emails, **PhishER** helps your InfoSec and Security Operations team cut through the inbox noise and respond to the most dangerous threats more quickly. Available as an optional add-on across all subscription levels.

Phishing Reply Tracking™ allows you to track if a user replies to a simulated phishing email and can capture the information sent in the reply. This feature works hand-in-hand with the simulated CEO Fraud attacks you can launch to inoculate high-risk employees.

Social Engineering Indicators™ (SEI) patented technology, turns every simulated phishing email into a tool IT can use to instantly train employees. When a user clicks on any of the 5,000+ KnowBe4 simulated phishing emails, they are routed to a landing page that includes a dynamic copy of that phishing email showing all the red flags. You can also customize any simulated phishing email and create your own red flags. Users can then immediately see the potential pitfalls and learn to spot the indicators they missed in the future.

USB Drive Test™ allows you to test your user's reactions to unknown USBs, on average 45% of users will plug in USBs they find! You can download a special, "beaconized" Microsoft Office file from your KnowBe4 admin console onto any USB drive which you can drop at an on-site high traffic area. If an employee picks up the USB drive, plugs it in their workstation, and opens the file, it will "call home" and report the fail. Should a user also enable the macros in the file, then additional data is also tracked and made available in

templates.

User Management and Reporting

Smart Groups

Automate the path your employees take to smarter security decisions. With the powerful new Smart Groups feature, you can use each employees' behavior and user attributes to tailor phishing campaigns, training assignments, remedial learning and reporting.

You can now create "set-it-and-forget-it" simulated phishing and security awareness training campaigns so you can instantly respond to any phishing clicks with remedial training or have new employees automatically notified of onboarding training, and much more. The "Incremental Phishing with Smart Groups" video has been published in the Help Center. Here [is the link](#).

Easy User Management

As the Security Awareness Training project leader, KnowBe4's **Active Directory Integration** allows you to easily upload user data and saves you time by eliminating the need to manually manage user changes. Once the ADI is configured, users will be added, changed and archived in sync with changes made within AD automatically. For security reasons, the synch only works one-way. You can also upload users with CSV files.

Security Roles allows you to assign granular access control for users and groups within the KnowBe4 console. Create custom permissions for the exact roles needed by your organization. Easily allow groups like HR teams to access reporting only to review individual user results or employees with creative control to create phishing templates and landing pages.

awareness program statistics. If you manage multiple KnowBe4 accounts, Roll-up Reporting makes it easy to select reports and compare results in aggregate across accounts or multi-location offices.

See for yourself how easy it is to train and phish your users!
