? Rx Destroyer™ drug disposal products are utilized in-home and in a large spectrum of businesses. Rx Destroyer™ recognizes disposal processes and regulations vary from state-to-state and business-to-business. In fact, certain businesses standardize on incineration as a final means of destruction. Although it may be safe to dispose in common trash for some users, always be aware of facility, local, state, or tribal requirements which may prohibit discarding Rx Destroyer™ to common trash.

1. DO NOT add effervescent or antacid or gassing medications.
2. If bottle swells, effervescent or gassing additives have been inadvertently introduced, do not open container. Consult supervisor to dispose of container in a controlled and safe manner.
3. Prior to first use of Rx Destroyer™ products, review internal processes and or consult supervisor

## Rx Destroyer™ ALL-PURPOSE Formula Directions

1. Load medications into the bottle\*
2. Tightly replace cap
3. Gently shake to mix solution over medications
4. Store in a safe and secure location...use until full
5. Bottle is full when contents are within 2 inches from cap – DO NOT OVERFILL
6. Discard bottle and its contents into common trash or according to business process and regulations.
7. Always follow institutional policies, local, state, tribal and federal disposal regulations for compliance.

\*Outer shell of capsules and patch material will NOT dissolve.

## USES

- All non-hazardous medications (DEA-controlled & Non-controlled). Check [Federal & State Guidelines](#) on how to determine if medications are hazardous waste.

- In cases where a business has determined they can safely commingle hazardous and non-hazardous in Rx Destroyer™, Generator shall follow worst case medication disposal scenario process to ensure safe and proper disposal of bottle contents.
- Pills, Capsules, Tablets, Liquids, Lozenges, Transdermal Patches, Fentanyl Lollipops, Suppositories.
- Do not add gassing items such as effervescent, antacid medications, syringes (hardware) or drugs known to react with one another such as sodium bicarbonate and aspirin. Combinations of medications added to Rx Destroyer™ are limitless. Always consult your Pharmacist or staff supervisor with questions regarding combinations which may produce gasses prior to use.

## QUICK FACTS

- Rx Destroyer™ pharmaceutical disposal system is a ready-to-use product.
- System requires no additives or special training to use.
- Easy as 1-2-3: 1) Load 2) Shake 3) Discard
- System contains patented solution that begins dissolving medications on contact. Active medication ingredients are adsorbed or neutralized by activated charcoal. Adsorption time varies depending on additive and existing contents.
- Each container contains a carefully formulated balance of ingredients that will destroy to medication capacity.
- Rx Destroyer™ patented formula controls :
  - Fast dissolving formulation breaks medications down quickly
  - [Specialty formulated activated carbon process allow for increased capacity](#)
  - Container system automatically controls internal pressure
- [Need more State and Federal Regulation information – click here](#)
- Rx Destroyer™ US Patent #9,403,197
