Patrick test

REVIEWED

By Chris at 11:01 am, Jul 20, 2020

Pat·rick test (pat'rik),

a test to determine the presence or absence of sacroiliac disease; with the patient supine, the hip and knee are flexed and the external malleolus is placed above the patella of the opposite leg; this can ordinarily be done without pain, but, on depressing the knee, pain is promptly elicited in sacroiliac disease.
