Wisconsin	262, 414, 534, 608, 715, 920
Wyoming	307

Contrary to what most Americans are likely to believe, area codes exist outside of the US. There are 395 area codes in the world: 317 in the US, 41 in Canada, 17 non-geographic, and 20 others that are mostly in the Caribbean. California is the state with the most area codes at 32 followed by Texas (26), New York (18), Florida (17), and Illinois (13).

In the [US](#) and its territories, [Canada](#), and the Caribbean, the organization and allocation of telephone numbers is governed by the North American Numbering Plan Administration (NANPA). NANPA organizes the allocation of area codes and telephone prefixes to various phone companies. The basic format of a phone number in any of these countries is **NPA-NXX-XXXX** or **(NPA) NXX-XXXX**.

NPA: Area codes came into use during the early 1940s. NPA codes were developed by AT&T and the Bell System to divide the coverage area into "number plan areas" (abbreviated NPA). NPA codes are more commonly referred to as area codes. While the system was developed in the 40s, direct dialing of long distance did not begin until the early 50s. Some area codes are reserved for special purposes. For instance, area code 800 (commonly referred to as 800-numbers) is reserved for toll free calls where the *called* party is charged instead of the *calling* party. Also, not all area codes are currently in use.

NXX: The next three digits of a landline number or cellphone number are called the NXX. The NXX is also known as the prefix or exchange. Various telephone carriers will reserve blocks of telephone numbers by reserving an NXX within an area code. Like area codes, not all prefixes are currently in use.

Subscriber: Finally, the final 4 digits of the phone number are known as the subscriber or local number. Based on the total number of active NPA and NXX combinations reserved and that each one could have up to 10,000 possible subscriber numbers, the current total possible number of telephone numbers is 1,699,140,000. Based on the total population of the US and Canada according to the US Census and the World Bank, that leaves 4 phone numbers for every person. Remember though that phone numbers are no longer just used for standard home phones. Many telephone numbers are now used for fax machines, cell phones or wireless phones, or internet connections so one person may actually need multiple phone lines.

About AllAreaCodes.com

For looking up information on a specific phone number, the [free reverse phone lookup](#) allows you to see the name and address of phone numbers listed in the white pages of phone books throughout the US. For unlisted or cell phone numbers, we provide a convenient price comparison of popular services that allow you to search deeper for the owner of a phone number.

To find information on a specific area code, use the [area code lookup](#) that makes it easy to find an area code by number and gives detailed information including city/state, timezone, and [area code maps](#). If you are looking for the area code for a particular city, you can [search area codes by city](#) using our area code finder.

To browse all area codes, we have a list of all United States [area codes by state](#) and [area codes by number](#). The [area code list](#) includes a printable copy that you can print and use for reference.

For international numbers, we also include [Canadian area codes](#). For dialing internationally, see the list of [international dialing codes](#) with instructions on how to dial foreign numbers or dial U.S./Canadian number while traveling internationally.
