## WIS 164 study - schedule

### Construction north of Howard Lane

Construction north of Howard Lane will occur only when or if traffic volumes in those areas of the project reach the four-lane threshold volume of 13,000 vehicles per day.

Based on traffic projections, it is not expected that traffic volumes between Howard Lane and County Q (Waukesha County) will reach 13,000 vehicles per day before 2010. Traffic volumes in Washington County are not expected to reach 13,000 vehicles per day until 2025 or beyond.

If traffic growth exceeds what is predicted, construction could be moved up, based on funding availability. Additionally, WisDOT is committed to completing safety and/or spot improvements as needs arise.

### County Q Intersection

County Q Intersection project is scheduled for construction in 2009.
